

Technology Stack

Date	15 March 2026
Team ID	xxxxxx
Project Name	RK Health – AI Smart Patient Appointment & Medication Reminder
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose

1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	HTML5, CSS3, JavaScript (ES6)	Used to build a responsive, interactive, and user-friendly healthcare dashboard with appointment, medication, and report management features.
2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	<i>Google Apps Script (JavaScript)</i>	Handles business logic, processes API requests, performs CRUD operations, connects with Google Sheets, and integrates external APIs such as Groq AI, Twilio, and Google Calendar.
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	<i>Google Sheets</i>	Acts as a cloud-based database for storing user accounts, appointments, medications, health records, AI summaries, and reports. Easy to integrate with Google Apps Script and cost-effective.

4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	<i>GitHub Pages (Frontend), Google Apps Script Web App (Backend)</i>	GitHub Pages provides free and reliable frontend hosting, while Google Apps Script hosts backend services and enables cloud-based processing.
5	Version Control & CI/CD	<i>[GitHub]</i>	Used for source code management, version control, collaboration, project backup, and automatic deployment through GitHub Pages.
	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	<i>Groq AI API, Twilio SMS API, Google Calendar API, Google Sheets API</i>	Groq AI generates healthcare summaries and recommendations, Twilio sends medication reminders, Google Calendar schedules appointments, and Google Sheets stores healthcare records
