

Project Initialization and Planning Phase

Date	15 March 2024
Team ID	xxxxxxxxx
Project Title	RK Health – AI Smart Patient Appointment & Medication Reminder System
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed project aims to develop an AI-powered healthcare management platform that simplifies appointment scheduling, medication reminders, patient health record management, and AI-assisted medical summaries. The system integrates cloud technologies with Artificial Intelligence to improve healthcare accessibility, reduce missed appointments, and help users manage their medical information from a centralized dashboard. It also provides SMS reminders, calendar scheduling, health analytics, and downloadable health reports.

Project Overview	
Objective	The primary objective of RK Health is to build an intelligent healthcare management system that enables patients to manage appointments, medication schedules, and health records efficiently while using AI to generate easy-to-understand medical visit summaries and healthcare insights.
Scope	The project provides a complete cloud-based healthcare management solution including patient registration, appointment scheduling, medication reminder management, AI-generated health summaries, report generation, dashboard analytics, SMS notifications, and Google Calendar integration using modern web technologies and cloud services.
Problem Statement	

Description	Patients often forget medication schedules and doctor appointments due to busy lifestyles and lack of proper reminder systems. Healthcare records are usually scattered across different platforms, making them difficult to manage. Existing reminder applications generally do not provide AI-generated health summaries or centralized patient record management.
Impact	Addressing these challenges will reduce missed appointments, improve medication adherence, organize patient records, enhance healthcare accessibility, support doctors with AI-generated visit summaries, and improve the overall patient healthcare experience.
Proposed Solution	
Approach	Develop a cloud-based healthcare platform using HTML, CSS, JavaScript, Google Apps Script, Google Sheets, Groq AI, Twilio SMS, and Google Calendar. The application stores healthcare records securely in Google Sheets, sends automated reminders, generates AI-powered medical summaries, and provides health reports through an interactive dashboard.
Key Features	☐ Secure User Login System ☐ Appointment Management

	- ☐ Medication Reminder Management - ☐ Patient Health Record Management - ☐ Google Sheets Cloud Database - ☐ Google Calendar Appointment Scheduling - ☐ Twilio SMS Notifications - ☐ AI Visit Summary Generation using Groq AI - ☐ Dashboard Analytics - ☐ Health Report Generation (PDF) - ☐ Responsive User Interface - ☐ Future Support for Wearable Devices - ☐ Predictive Healthcare Recommendations
--	--

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Processor specifications	Intel Core i5 (10th Gen or above) / AMD Ryzen 5 or equivalent
Memory	RAM specifications	8 GB
Storage	Disk space for project files, reports, and cloud data	256 GB SSD (Recommended: 512 GB SSD)
Software		
Frameworks	Web Technologies	HTML5, CSS3, JavaScript, Google Apps Script
Libraries	Additional libraries and cloud services	Google Apps Script Services, Google Sheets API, Google Calendar API, Twilio SMS API, Groq AI API (LLaMA 3.3-70B Versatile)
Development Environment	IDE	Visual Studio Code,
Data		
Data	Healthcare records and cloud storage	Google Sheets Database
