

Coding & Solution

Date	15 March 2026
Team ID	XXXXXX
Project Name	RK Health – AI Smart Patient Appointment & Medication Reminder System.
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	GitHub: https://github.com/madhupennabadi-maker/R-K-hospitals Live Demo: https://madhupennabadi-maker.github.io/R-K-hospitals/login.html
Programming Language(s)	HTML5, CSS3, JavaScript (ES6), Google Apps Script

Framework(s) Used	Google Apps Script, Google Sheets API, Groq AI API, Twilio SMS API, Google Calendar API, GitHub Pages
Key Features Implemented	• Secure Login System • Patient Dashboard • Appointment Management • Medication Reminder Management • Google Sheets Cloud Database • Google Calendar Integration • Twilio SMS Notifications • AI-powered Healthcare Summary using Groq AI • Health Report Generation • Responsive User Interface • Dashboard Statistics • CRUD Operations for Patient Records
Pending / Incomplete Features	• Wearable Device Integration • Advanced Healthcare Analytics • Predictive Healthcare Recommendations • Multi-factor Authentication • Voice Assistant Support
Setup / Run Instructions	1. Clone or download the repository. 2. Configure Google Apps Script and deploy it as a Web App. 3. Create the required Google Sheets database. 4. Add Groq AI API Key, Twilio Account SID, Auth Token, and Google Apps Script URL into the configuration file. 5. Upload the frontend to GitHub Pages. 6. Open the live website and log in using the demo credentials.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes

2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	yes

Additional Notes / Comments:

The RK Health – AI Smart Patient Appointment & Medication Reminder System is developed using a modular software architecture with separate frontend and backend components. The frontend is built using HTML, CSS, and JavaScript, while the backend is implemented using Google Apps Script with Google Sheets as the cloud database. The application integrates Groq AI for AI-powered healthcare summaries, Google Calendar for appointment scheduling, and Twilio SMS for medication reminder notifications. The project is managed using GitHub for version control and deployed through GitHub Pages for online access. The code follows clean coding practices with reusable modules, meaningful variable and function names, input validation, error handling, and proper documentation, making the system reliable, maintainable, scalable, and easy to extend with future enhancements.
