

Project Executable Files & Execution Guide

Date	15 March 2026
Team ID	XXXXXX
Project Name	RK Health – AI Smart Patient Appointment & Medication Reminder System.
Maximum Marks	3 Marks

Project Executable Files & Execution Guide:

To successfully evaluate your project, evaluators require access to your source code, live deployments, and clear instructions on how to build and run your application locally. Complete the sections below to document your project repositories and execution steps.

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository (e.g., GitHub, GitLab)	https://github.com/madhupennabadi-maker/R-K-hospitals

Live Deployed Application (e.g., Vercel, AWS, Heroku)	https://madhupennabadi-maker.github.io/R-K-hospitals/login.html
Demo Video Link (Optional but recommended)	https://docs.google.com/videos/d/1USsQXHgK3OfRp6YBsF3kKDOSDYOyapQ1XMblcQq_MM/edit?usp=sharing

Step 2: Key Executable Files & Folder Structure

Briefly explain the primary directories and where the core execution files are located within your repository.

S.No	Folder / File Name	Description & Purpose
1	/css/	Contains all CSS files (style.css, responsive.css) responsible for the application's user interface and responsive design.
2	/js/	Contains JavaScript modules such as app.js, appointments.js, medicine.js, dashboard.js, reports.js, summary.js, and config.js for frontend functionality and API communication.

3	/backend/Code.gs	<i>Google Apps Script backend that manages API requests, Google Sheets database operations, Groq AI integration, Google Calendar events, and Twilio SMS notifications.]</i>
4	login.html, dashboard.html, index.html	<i>Main entry pages of the RK Health application including login, dashboard, and landing page</i>

Step 3: Local Setup & Execution Instructions

Provide a step-by-step guide to installing dependencies and launching the application on a local machine.

Step	Action / Terminal Command	Expected Outcome / Notes
1	<i>Clone the repository from GitHub or download the ZIP file.</i>	Project source code is available on the local machine.
2	<i>Open the project folder in Visual Studio Code.</i>	<i>All project files become available for editing and execution.</i>
3	<i>Deploy backend/Code.gs as a Google Apps Script Web App and configure Script Properties (Groq API Key, Twilio credentials, Spreadsheet ID).]</i>	<i>Backend APIs become accessible through the Web App URL</i>

4	<i>[Update the Web App URL inside js/config.js and open login.html using Live Server or access the deployed GitHub Pages website.]</i>	RK Health application launches successfully with backend connectivity.
5	Log in using the demo credentials (admin / admin123) and test appointment scheduling, medication reminders, AI summary generation, and report management.	All major modules function correctly and data is stored in Google Sheets.
