Project Name	RK Health – Smart Patient Appointment & Medication Reminder System.
Maximum Marks	1 Mark

Scalability & Future Plan

Describe how the current solution can scale to handle increased load or users, and outline the features or enhancements planned for future releases.

Scalability

Aspect	Details
Current Architecture	RK Health follows a cloud-based architecture using HTML, CSS, and JavaScript for the frontend, Google Apps Script for backend services, Google Sheets as the cloud database, and integrates Groq AI, Google Calendar, and Twilio SMS APIs. The application is deployed using GitHub Pages, making it lightweight, accessible, and easy to maintain.
Scalability Approach	The modular architecture allows new healthcare features and services to be added without affecting existing functionality. Cloud-based services such as Google Apps Script and Google Sheets can support increasing numbers of users, while external APIs can be upgraded or replaced as requirements evolve.
Expected Growth / Load	The system is designed to support multiple patients, doctors, and administrators simultaneously. It can be extended to support multiple hospitals, larger healthcare organizations, secure authentication, wearable device integration, and more advanced AI-powered healthcare services.

Future Plan

S.No	Planned Feature / Enhancement	Target Timeline	Priority
1	Wearable Device Integration for real-time health monitoring	Next Release	High
2	Secure Authentication with OTP and Multi-Factor Authentication (MFA	Next Release	High
3	Predictive Healthcare Recommendations using Advanced AI Models	Next Release	Medium
4	Advanced Analytics Dashboard with health trends and disease prediction	Next Release	Medium
